

TBS – DORMAKABA EXOS INTEGRATION

SEAMLESS BIOMETRIC ACCESS CONTROL

TBS is proud to be partnered with dormakaba, one of the world's leading access control system providers. Kaba exos 9300 is a flexible and scalable access management solution. It offers a wide range of scalable and intelligent modules that can be easily adapted to meet your specific requirements, including access management, visitor management, tenant management, parking management, , and more.

The Dormakaba TBS integration is suitable for both small and large projects. The TBS devices and user templates are managed from within exos. The integrated solution is fast, reliable and highly secure. Data is secured and stored with SSL encryption. The TBS devices support liveness detection and can create and manage up to 10,000 templates.

Biometric Enrolment

TBS offers a variety of biometric enrolment options:

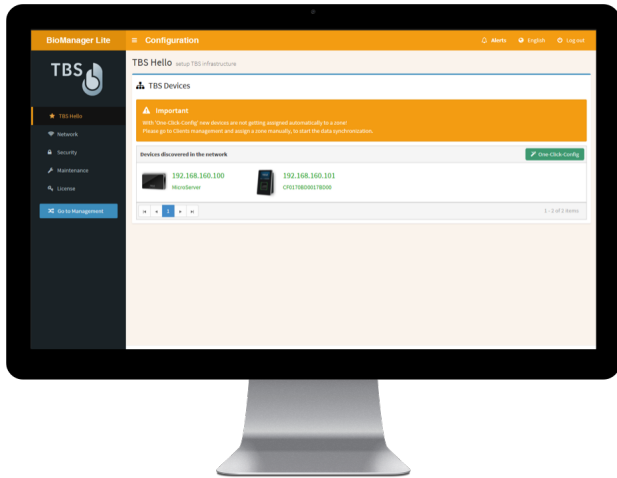

- | | |
|------------------|-------------------|
| On device | Central enrolment |
| Remote enrolment | Mobile enrolment |

Single User Interface

Administrators and managers of the system can access all the features and functionality from a single, intuitive user interface, removing the need to switch between applications. This also includes the enrolment of the users which can be triggered in exos.

Biometric Synchronisation

The Dormakaba / TBS seamless integration allows for automatic distribution of biometric templates between devices. Once enrolled, individual templates are automatically distributed to all devices on the network, where the user has access privileges. If a user is deleted, the user's templates and access rights are removed.

Flexibility

The TBS – Dormakaba integration enables integrators and end-users to specify the most appropriate biometric device from one of the largest portfolios on the market. Multiple types of biometric readers can be deployed across a single installation or corporation.

Scalability

The TBS infrastructure has been designed for scalability and allows for an unlimited number of devices to be connected across an estate. Combine this with the unlimited number of doors that can be secured by Dormakaba Exos and you have a truly scalable solution.

Future-proof

Both TBS and Dormakaba are continuously aligning research and developments, thereby ensuring that our clients can continue to benefit from our state-of-the-art integrated solutions.

Reliability

TBS supply the world's most reliable biometric fingerprint and iris recognition solutions. We have a solution for every type of installation.
